## Drug Utilization Review policies:

- Length of prior authorizations is a year unless otherwise specified.
- The use of pharmaceutical samples will not be considered when evaluating the member's medical condition or prior prescription history for drugs that require prior authorization.
- Prior authorization for a non-preferred agent in any category will be given only if all other criteria is met, including clinical criteria and step therapy specific to that category.
- Requests for non-preferred brand name agents with a generic formulation available must meet the Dispense as Written (DAW1) criteria for approval in addition to as any other applicable coverage criteria/rule (unless otherwise noted).
- A trial will be considered a failure if a product was not effective at maximum tolerated dose with good compliance, as evidenced by paid claims or pharmacy print outs or member has a documented contraindication, intolerance, or adverse reaction to an ingredient
- Unless otherwise specified, the listing of a brand or generic name includes all legend forms of that drug. OTC drugs are not covered unless specified.
- Non-solid dosage preparations must meet [Non-Solid Dosage Preparations](#) prior authorization criteria even if they are preferred in the clinical category.
- Grandfathering may be allowed in cases where the clinical condition has been verified by a specialist, member is currently receiving FDA or compendia approved medication, and there is clinical evidence for decompensation of member's condition if agent is switched (subject to clinical review).
- Initial prior authorization and [renewal non-adherence criteria](#) must be met for renewal requests, as applicable.
- The use of all preferred and non-preferred agents must meet recommendations found in the FDA label or compendia (e.g., diagnosis, age, dosage, frequency, route). Compendia supported use is defined as at least of level of IIa efficacy rating and IIb recommendation. ND Medicaid uses DrugDex ® compendia. Requests outside of FDA approved or compendia supported use are not reviewable by prior authorization and the request will be dismissed. Sec. 1927. [42 U.S.C. 1396r-8](d)

### *Therapeutic Duplication*

- One Strength of one medication is allowed at a time
- Medication classes not payable together:
  - DPP4-Inhibitors and GLP-1 Agonists
    - GLP-1 and DPP4-Inhibitors should not be used concurrently due to similar mechanisms of action
  - DPP4-Inhibitors and Insulins
    - GLP-1 should be considered in most members prior to insulin
    - When initiating injectable therapy, sulfonylureas and DPP-4 inhibitors are typically discontinued
  - Sulfonylureas and Insulins
    - When initiating injectable therapy, sulfonylureas and DPP-4 inhibitors are typically discontinued
  - Humulin R U-500 is not allowed with any other insulin (basal or prandial)
    - Humulin R U-500 is indicated for monotherapy. It acts differently than regular insulin (U-100). It provides both basal and prandial coverage. Injections can be increased to 3 times per day for prandial coverage.

### **Covered options in combination with Insulin therapy**

GLP-1 Agonists, SGLT-2 inhibitors, TZDs, and metformin.

- GLP-1 Agonist and SGLT-2 inhibitors are recommended first line treatments for every pathway indicated in the guidelines (ASCVD, HF, CKD, hypoglycemia risk, and to minimize weight gain)
- TZDs increase insulin sensitivity and hypoglycemia risk should be monitored
- Metformin is recommended throughout treatment escalation.

# Preferred Diabetic Supply List (PDSL)

## Electronic Step Care and Concurrent Medications

The ADA guidelines point out the lack of clinical utility and cost-effectiveness of routine Self-Monitoring of Blood Glucose (SMBG) in non-insulin treated members. # Over the Counter (OTC)

The following is a listing of NDCs that have been paid in the previous calendar year. This list is provided as a convenience to find a covered OTC NDC and will be updated yearly. Please note that NDCs listed here are not guaranteed to be covered as coverage requirements may change.

The best approach would be to start at the top of the list and move your way down to find an NDC that is reasonably able to be dispensed as it is listed by descending script volume.
